Email + meeting progress

Work completed from Simbiat's email, five supplied images and the 1:48:34 meeting transcript.

Current position: the two banner assets and their CMS bindings are published. The application changes are implemented and tested locally, with deployment still outstanding. Stock is documented, not applied to inventory.

What has been completed

Workstream	Completed result	Status
Community stories	Compact cards, full-story reader, title/author search and six cards per page.	Local / tested
Ingredient searches	Selected unfamiliar ingredient names link to Google without rewriting label or allergen text.	Local / tested
Homepage covers	Food collage for Community Stories; Pantry People cap for Merch. Editable through Contentful.	CMS published; app local
Starting stock	Mapped 20 units per size for egusi, ogbono and palm oil; all other approved products retain 50.	Intake validated
Client decisions	Recorded co-ownership, IRS-document readiness, accepted 4 PM time and mailbox funding arrangement.	Recorded
Recipe direction	Reconciled the later meeting decision: record content first; paid recipe products remain on hold.	Recorded
Correspondence	Prepared an updated reply covering allocations, email-plan checks, funding and website revisions.	Draft / unsent
Verification	Production build, TypeScript, targeted lint/format checks and 36 selected checks passed.	Passed

Reading this report

Screenshots are local browser previews. CMS publication is distinct from deploying the website application. Account discussions in the meeting are recorded as client context, not completed Stripe or mailbox work by the agent.

Prepared 24 October 2026, Asia/Makassar. This is the intake/report date; the original email and recording dates have not been established.

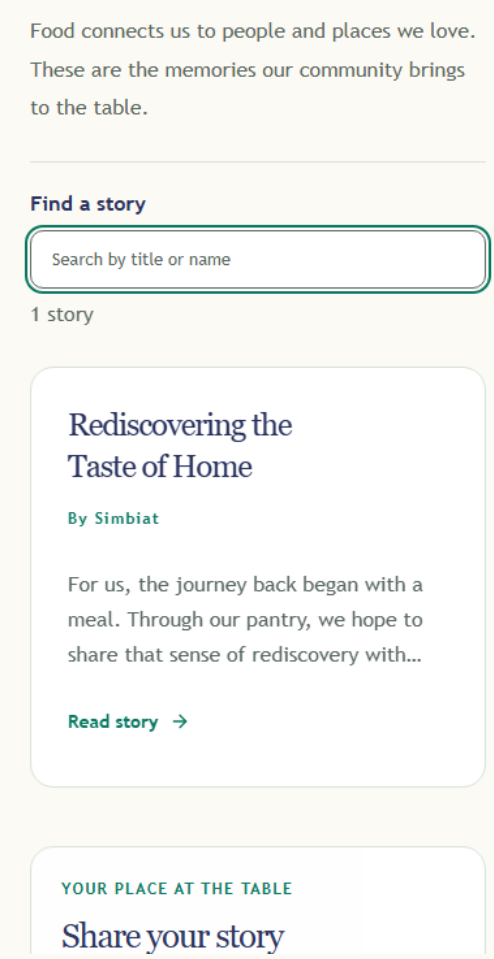

Community story previews

The email and meeting both request a compact alternative to full-text story listings.

01 / Community stories

Request: headings or short previews should replace full bodies in the listing (meeting 01:35:00-01:35:50; also repeated in the email).

Delivered: short cards with a Read story button; a scrollable full-text dialog; search by title or author; and six-card pagination. Published submissions and approved CMS stories use the same layout. Keyboard dismissal restores focus; submission moderation and private email handling remain in place.

Compact preview cards

Full story on demand

Local browser previews: readers see a short excerpt first and open the complete story only when they choose. Existing approved editorial stories retain their article-page links.

Additional fixture checks cover pagination, author search, long stories, keyboard focus and escaped submitted text. Application deployment is still outstanding.

Ingredient search links

02 / Ingredient search links - actual local screenshots added to this report.

Request: help customers identify unfamiliar ingredients without replacing the supplied ingredient list (meeting 00:59:35-01:03:29).

- Added small search icons and Google links for selected names such as tiger nuts, nutmeg, cloves and specialty pepper-soup ingredients. Links open in a new tab with accessible labels.
- Kept the original ingredient wording and separate allergen statements. Water and sugar remain plain text; existing product-level Learn more links remain.

Tiger Nut Drink

Product details

Creamy, mellow, and gently spiced—our tiger nut drink blends tiger nuts and water with ginger, cloves, cinnamon, and the sweetness of honey. Enjoy chilled for a refreshing taste of tradition.

Ingredients: tiger nuts, water, ginger, cloves, cinnamon, and honey.

16 oz bottle

Chin Chin

Product details

Sweet, golden, and delightfully crunchy. Made with flour, sugar, butter or margarine, milk, and ground nutmeg, our chin chin is a comforting favorite to share or savor by the handful.

Ingredients: flour, sugar, butter or margarine, milk, and ground nutmeg.

Contains milk.

16 oz jar

Actual product-details sections captured at a 390-pixel browser width. These are focused local screenshots, not mockups.

Visible in the screenshots: green underlined ingredient names with a small magnifying-glass icon. Tiger nuts, ginger, cloves, cinnamon and nutmeg are linked. Water and sugar remain plain text; the Chin Chin **Contains milk.** statement is preserved.

Verified link behavior

The tiger nuts link points to Google's search for **tiger nuts ingredient** and opens in a new tab. The captured Chin Chin section includes the nutmeg link and unchanged allergen statement.

Local pages: /shop/tiger-nut-drink and /shop/classic-chin-chin. Screenshot capture rechecked the tiger nuts destination, the new-tab target and the visible milk-allergen statement.

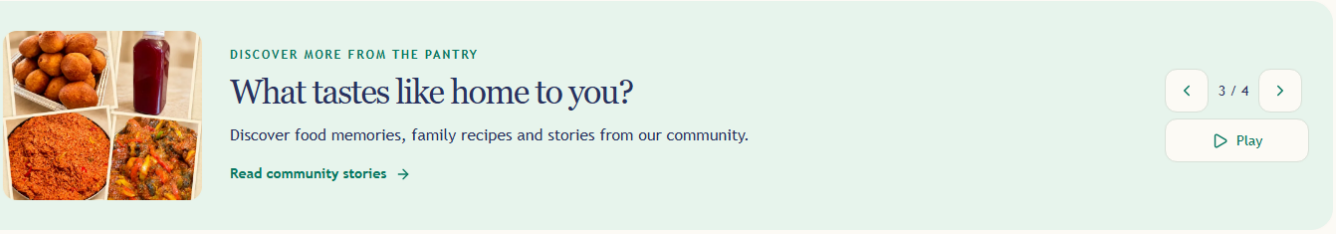

QR codes were discussed, but none were generated: Simbiat said she can create them herself. Ingredient links remain local pending application deployment.

The two requested covers

All five supplied files were inspected: three reference screenshots and two cover images.

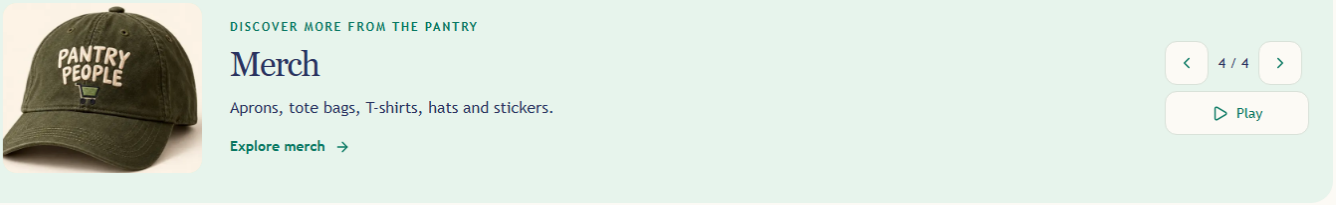

Community Stories

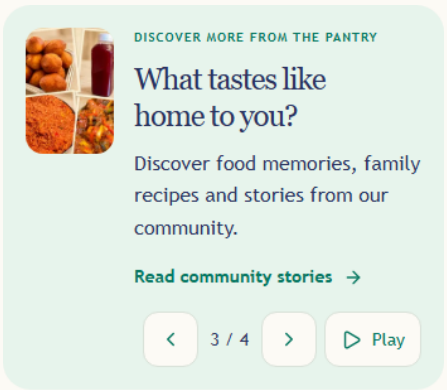

Used the additional food-and-drink collage from the supplied folder for the community highlight. The existing article/author image and /stories destination remain intact.

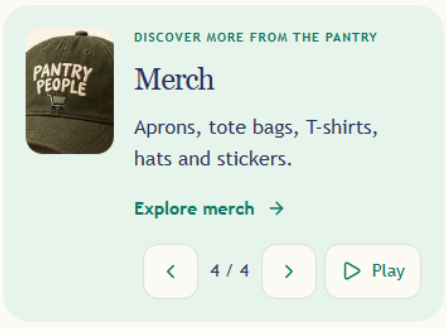

Merch

Used the olive-green Pantry People cap for the Merch highlight. Its destination remains the Merch category. The image does not create a priced product listing.

Local desktop and mobile previews at 1440 and 390 pixels. The original source images were not modified.

Published in Contentful: two optional image fields, two assets and their site-settings bindings. The homepage reads these fields locally. The existing public application still needs deployment to display them.

Backups and version checks protected other settings/locales and editor drafts. A repeat CMS preview reports no new fields, uploads or reference changes remaining.

Starting stock recorded

The email resolves the size-allocation question and supersedes the earlier total for three products.

Latest instruction: 20 of each active size for egusi, ogbono and palm oil = **40 units per product**. The other 18 approved products retain 50 each.

Product	Recorded allocation	Total
Whole Egusi (Melon seeds)	1 oz - 20 units 1 lb - 20 units	40
Whole Ogbono Seeds	1 oz - 20 units 1 lb - 20 units	40
African Red Palm Oil	32 oz - 20 units 1/2 gallon (64 oz) - 20 units	40
Chin Chin	One active variant - 50 units	50
Coconut Candy Crunch	One active variant - 50 units	50
Donkwa / Adakwa / Tanfiri	One active variant - 50 units	50
Dried Hibiscus Flower	One active variant - 50 units	50
Garri	One active variant - 50 units	50
Ground Cameroon Pepper	One active variant - 50 units	50
Kuli Kuli	One active variant - 50 units	50
Lightly Salted Roasted Groundnut	One active variant - 50 units	50
Nigerian Beans	One active variant - 50 units	50
Nigerian Dates (Dabino)	One active variant - 50 units	50
Pepper Soup Mix	One active variant - 50 units	50
Smoked Catfish	One active variant - 50 units	50
Smoked Large Red Crayfish	One active variant - 50 units	50
Suya Mix (Yaji)	One active variant - 50 units	50
Tiger Nut Drink	One active variant - 50 units	50
Tiger Nuts	One active variant - 50 units	50
Yam Flour	One active variant - 50 units	50
Zobo Drink	One active variant - 50 units	50

21 products / 24 active variants / 1,020 units. Allocations were checked against published active variant IDs. Sample Dried Ugu and inactive legacy variants remain excluded.

No live or sandbox inventory was changed or reset. The snapshot is ready for a separate live-inventory setup; earlier stock records remain historical.

Decisions reconciled

The email answers open questions; later meeting decisions govern changes of direction.

Topic	Recorded outcome
Ownership + IRS	Email: the LLC is co-owned by Simbiat and her mother; IRS documentation and a tax ID are available. Meeting: ownership is reported as 50/50. No private numbers were collected.
Accepted time	Recorded acceptance of 4 PM Central Time. The email does not establish a new appointment date; no event was created. The older proposal referenced October 23.
Business mailbox	Recorded permission for the developer to purchase with client funding. Verify the existing Hostinger plan, agree the total/term/renewal cost, then obtain the subscription payment before ordering.
Stripe progress	Recorded the onboarding and identity-review discussion. Separate developer access, final capabilities, payout setup and live checkout were not independently verified. Current code remains sandbox-only.
Recipes	Earlier paid-PDF/printed-recipe ideas were reconciled with the later decision at 01:33:14-01:33:50: build preparation videos/photos first and defer a paid recipe product. No paid recipe or fixed print price was created.
Social media	Recorded interest in a reasonably priced proposal after website readiness. Simbiat will consider scripts and filming for your editing, with partial creative control. No retainer, posting permission or price was agreed.
Identity + history	Kept the approved logo/colors and existing content. Family retail history and feedback on photography/logo quality were recorded as context; no rebrand or About-page rewrite was undertaken.

Correspondence and project records

Prepared a new unsent reply (page 8). Updated the README, client context, launch settings, development log and historical-draft notices so the answered ownership, stock and time questions are not repeated.

The email-plan guidance directs the client to Hostinger's Emails section and the plan name for the domain. No Hostinger account entitlement, current subscription price, payment receipt or active inbox was verified.

Checks and remaining work

Verification reflects the completed work recorded in this development session.

Verification completed

- Production build and TypeScript passed; targeted ESLint, formatting and whitespace checks passed.
- All 36 selected desktop/mobile checks passed across client feedback, Contentful mapping and meeting revisions. They include cover images/destinations, optional-image fallback, existing reading/photo controls, ingredient links and story readers.
- An eight-story fixture verified six/two-card pagination, author search, search reset, long-text scrolling, escaped submitted text and focus restoration at 1440 and 390 pixels. Layout checks also covered 320 and 2560 pixels.
- Banner and story screenshots were visually inspected. All 21 products, 24 active variants and the 1,020-unit intake total were validated. CMS repeat preview reports no pending cover changes.

These are selected checks, not a full production acceptance test. The earlier 14-check run is included in the development history; it is not added to 36 as a separate final total.

Remaining homework

- **Zul:** deploy the tested application updates and verify the public story cards, ingredient links and banner covers.
- **Zul:** check the brother's story in the owner review queue. Receipt and moderation remain unverified. Obtain cap pricing, sizes and stock only if a saleable listing is wanted.
- **Zul + Simbiat:** finish Stripe access/configuration, live-payment acceptance, inventory initialization and final shipping/tax/policy decisions.
- **Zul + Simbiat:** confirm/fund the mailbox plan, create the inbox and test incoming messages/replies before changing website email destinations.
- **Simbiat:** record preparation videos/photos. **Zul:** prepare the social-media proposal after website readiness. Recheck the meeting date before any scheduling action or time acknowledgment.

Source and evidence index

User-supplied email, five local images, and 1:48:34 meeting transcript; original sent/recording dates unverified.

Records: docs/client-feedback-2026-10-24.md; docs/client-meeting-2026-10-24.md.
Allocations: docs/starting-stock-2026-10-24.json. Reply: docs/simbiat-october-24-reply.md.

Evidence: artifacts/client-feedback-2026-10-24/ and artifacts/meeting-2026-10-24/. These folders contain screenshots, the CMS plan/backups and fixture results.

Mailbox reference: Hostinger: checking the email service included in a hosting plan (reviewed 24 October 2026).

Prepared reply

Draft only. This message has not been sent.

Before sending: check whether the 4 PM acknowledgment is still timely and update the deployment wording after publication. The original email date is unverified, and the earlier proposal referred to October 23.

Hi Simbiat,

Thank you for confirming these details and sending the pictures.

I've noted that you and your mom co-own the LLC and that you have the IRS documentation ready. Any tax, identity or bank details can be entered directly into Stripe when needed.

I've also recorded 20 units of each size for egusi, ogbono and palm oil. That makes 40 units of each of those products in total.

To check the email plan, log in to Hostinger, open **Emails** in the sidebar, and look for **iyayusufspantry.com**. Check the plan name shown for that domain. If no email service is listed, we'll check whether your account has an included service available before buying a plan. Hostinger's guide explains where to look.

I'm happy to arrange the purchase. Once I've confirmed the total price, billing period and renewal cost with you, you can send the subscription payment and I'll place the order. Then I'll set up **info@iyayusufspantry.com** and test incoming mail and replies.

I've noted your acceptance of 4 PM Central Time.

For community stories, I've prepared short preview cards with a Read story button, so readers can open the full story without scrolling through every story first. They can also search by title or name. I'll use the supplied food collage for the community banner and the Pantry People cap for the Merch banner. These website changes are being checked locally before deployment.

Best,
Zul

Scope of this report: no application deployment, inventory mutation, Stripe/account submission, mailbox/DNS change, subscription purchase, calendar booking or external message was performed during these revisions. CMS cover publication is complete.
